

system X CERAMIC PROTECTION  
**AVIATION**

**The Most Trusted Name in Professional Coating Technologies**

Whatever type of aircraft you own, it deserves nothing but the best.

That's why aircraft enthusiasts worldwide choose System X Aviation Ceramic Protection.

Quite simply, they trust System X to consistently provide unmatched paint protection, hardness and brilliance. A paint-protection system that utilizes proprietary ceramic technologies, System X doesn't work merely as a layered application. Instead, it interlocks its molecular structure with the surface molecules of paintwork to literally become the functional surface of your airplane's paintwork.

The result is a semi-permanent ceramic coating that won't wash off. System X exhibits outstanding resistance to friction, heat, pollutants and solvents — for a finish that locks in long-lasting beauty, as well as peace of mind.

# AVIATION

The high-altitude environment is very unforgiving. The effects of damaging UV rays, moisture, temperature extremes and pollution — compounded by factors such as deicing solutions, oil, exhaust fumes and bird/insect contaminants — can cause permanent damage that impairs your aircraft's performance while ruining its overall appearance. Until now...

A proprietary coating technology, System X Aviation Ceramic Protection is specifically designed to offer the ultimate paint protection for aircraft of all kinds — including helicopters and jets.

With our Aeronautic Ceramic Nano Coating line, owners and enthusiasts can have the utmost confidence that their aircraft will be rendered virtually immune to the adverse atmospheric conditions that cause the unsightly effects of paint oxidation and fading.

- ▶ **PROTECTION FROM HARMFUL ENVIRONMENTAL ELEMENTS** From soot and hydrocarbon buildup to UV ray aging, moisture erosion and pollutant damage, your aircraft is vulnerable to numerous types of element-related corrosion. In bonding to the substrate, System X Aviation Ceramic Protection provides a semi-permanent ceramic coating that won't wash off — thereby ensuring long-lasting clean surfaces and gloss retention, as well as years of paint protection.
- ▶ **ENHANCED PERFORMANCE** In keeping your aircraft clean, System X Aviation Ceramic Protection improves laminar flow and reduces drag, for increased fuel efficiency.
- ▶ **LONG-LASTING BEAUTY WITH MINIMAL MAINTENANCE** The unique formula of System X Aviation Ceramic Coatings bring out the full luster and sheen of your airplane's finish and extends paint life. The result? Greatly reduced cleaning and repainting expenses.
- ▶ **APPLICATION VERSATILITY** System X Aviation Ceramic Protection can be applied to all of your aircraft's painted exterior surfaces, including composites (but excluding rubber and soft plastic). By permanently bonding to the paintwork on a nano scale an extremely durable, crystal clear ceramic finish is formed which serves as a highly thwarting contaminant barrier.

# RENEGADE

CERAMIC NANO COATING

Our premier aeronautics coating, System X Renegade Ceramic Nano Coating offers a full year of protection in the harsh aeronautics environment — helping to minimize the corrosive effects of everything from acid rain to bird lime, solvents, deicing solutions, exhaust fumes, friction and heat. It is a proven performer in the coating industry, having passed rigid Boeing approval testing and demonstrated temperature tolerances that exceed 1,000 degrees.
